

■ **AllerAlt** - The alternative allergy treatment!

A reimbursable 15 minute scratch test (no needles) and a safe and effective treatment program. AllerAlts' Immunodrops are a natural mixture of allergens (pollen, pet dander, etc) that we all breathe or come in contact with every day mixed with a simple saline solution and then placed, a few drops at a time under the tongue. A process known as Sublingual Immunotherapy (SLIT) which has been approved by the World Health Organization and has been in use in Europe (where 50% of the patients on immunotherapy are prescribed SLIT) for decades.

Sublingual (under the tongue) immunotherapy (treatment of disease by suppressing an immune response) produces the same reaction in the body as allergy shots which are known as SCIT or Subcutaneous (introduced under the skin) Immunotherapy. The process of SLIT (and SCIT) immunotherapy both desensitize the body allowing it to understand that these every day allergens are not harmful foreign invaders which it must defend itself from through inflammation. Inflammation which then materializes in the nasal passages (stuffy nose), eyes (watery & itchy), sinuses (sinus headaches or infections), ear canals (ear infections), lungs (asthma), or skin (dermatitis or eczema).

■ **AllerAlt** - Offers a better solution!

With sublingual immunotherapy (SLIT) patients can take serum as oral drops in the comfort of their own home. The serum is absorbed into the bloodstream through the mouth. Over multiple doses, it gradually desensitizes the body to troubling allergens.

*Improving patients lives
and improving practice profitability*

“Why not keep your patients under your care by prescribing the same type of allergy drops that allergists prescribe?”

■ **SLIT (sublingual immunotherapy) is a safe treatment which significantly reduces symptoms and medication requirements in allergic rhinitis.**

- The Cocrane Review

■ **For information on how you can help both your patients and your practice with Sublingual Immunotherapy, please email: information@alleralt.com**

How many of your patients suffer from?

- *Sinus headaches or infections.*
- *Stuffy nose.*
- *Endless colds, a chronic cough, or recurrent bronchitis.*
- *Watery itchy eyes.*
- *Frequent ear infections.*
- *Constant Sneezing.*
- *Asthma.*
- *Itchy mouth or throat from eating certain foods?*
- *Muscle or joint pain.*
- *Skin rashes or eczema.*
- *Lack of concentration, confusion, depression, or forgetfulness.*

Sublingual Immunotherapy

Improving patient lives while enhancing practice profitability!

*Helping patients overcome allergies
& asthma one drop at a time.*

You no longer have to refer patients for treatments you can provide.

■ **67% of Allergists surveyed are prescribing self-pay allergy drops.**

We worked with the major allergenic extract manufacturers to produce allergy drops covering the most clinically relevant allergens giving F.P. / G.P. /

Pediatricians the ability to help their patients gain

relief while improving practice revenues.

■ **A 15-minute scratch test (no needles) and our Immunodrops can help both your patients and your practice.**

■ **Testing, Diagnosing and Treating allergies has to be driven to the primary care provider because 30 to 40% of the population has some form of allergies and there are just not enough allergists.**

- World Health Organization

What Doctors are saying about Allergy Drops

"Having suffered with allergies for years, but being unwilling to deal with the inconvenience of regular visits for injections, I have been delighted with AllerAlt's sublingual immunotherapy drops. While conventional remedies like antihistamines and nasal steroids have helped to control the symptoms, it's nice to finally be able to do something to combat the problem rather than just trying to cope with the symptoms." **MD in Minnesota**

"As a medical professional I have had great success with the AllerAlt drops prescribing them to all ages including children who could not tolerate more than 3 foods but who now can eat everything as well as to professional athletes who need to be on their game at all times. Especially during spring allergy season." **PA Tempe AZ.**

"I am a medical professional and have had allergy symptoms my whole life, year round, and seasonally allergies were worse. Based on my positive allergy test I started AllerAlt drops and within a month I was able to stop using my daily antihistamine for the first time in 40 years! My patients, both children and adults, have agreed that starting AllerAlt drops have made life much more enjoyable!" **NP- Minnesota**

Why Patients Prefer AllerAlts Immunodrops

Natural and Extremely Safe!

Allergy drops, also known as sublingual immunotherapy, are just the allergens that we breathe or come in contact with in our every day lives mixed in a solution of saline. In over 2 billion dosages there has never been a death or serious adverse reaction to allergy drops.

Painless

No shots or needles.

Convenient and cost effective

No weekly trips to the allergist costing the patient both time and money and the Immunodrops will save them thousands over the cost of a lifetime buying allergy medication.

Works fast!

Patients see results within 90 days, but most see them within weeks.

Effective on all age groups

Anyone can take or be given the Immunodrops. There have been patients from 2 years old to 80 that have responded to the drops. In the case of small children it has also been documented that there is a rare opportunity to actually stop the well-known progression of allergies into asthma. In Europe where SLIT has been used for over 60 years, it is actually recommended that children be placed on SLIT.

Long lasting results

Most people experience significant relief (clinical remission) from their allergies for years and for some it can even be a lifetime!

*"Our findings suggest the **needle-free** approach is a reasonable way to provide much-needed relief to millions of children who suffer from asthma or seasonal allergies."*

- Julia Kim, M.D. Pediatric Research Fellow at Johns Hopkins Children's Center.
